PROFESSIONAL EXPERIENCE

Application Development Manager | Aug 2020–Present

Anzer IT Healthcare Asia

- Responsible for managing 6 mobile applications and 5 web applications projects simultaneously while contributing on development of the backend Restful API.
- Projects include Hospital E-Book App, Nursing E-book App, Patient Portal App, Consent Form App, Central Registration App, Patient Charges App, Anzer Accounting & ERP Web-app, Management Dashboard Web-app, Accounting Dashboard Web-app, Patient Portal Admin Panel Web-app

Senior Programmer | Jan 2020–Aug 2020

Anzer IT Healthcare Asia

- Responsible for design, development and testing of accounting and ERP web application written in Perl language.
- API development for Hospital E-book Application with Spring Boot.

Programmer | Dec 2017–Jan 2020

Anzer IT Healthcare Myanmar Myanmar ISTD

- Responsible for analysis, design, testing, maintenance, and implementation, training of Electronic Medical Record system for Myanmar Hospitals.
- Responsible for design, development and testing of Attendance Management System for Japan, Integrated Database project for SEA by using the Spring Boot and PostgreSQL.

EDUCATION

Post Graduate Diploman in Software Development | 2016–2017

Myanmar Institute of Information Technology | [CGPA – 3.81/4](#)

Bachelor of Engineering (IT) | 2015–2016

Technological University (Mandalay) | [CGPA – 4.82/5](#)

Bachelor of Technology (IT) | 2011–2015

Technological University (Mandalay)

PROJECTS

Hospital E-book

Mobile Electronic Health Record system which offers doctor to monitor patients' conditions to deliver better patient care. Technologies using in this project are Spring Boot for API, MS SQL database and Flutter for mobile app.

Nursing E-book

Mobile Electronic Health Record system which offers nurse to effectively manage their work and do drug administration. Technologies using in this project are Spring Boot for API, MS SQL database and Flutter for mobile app.

Central Registration

A centralized hospital application designed to manage patient demographic information (CPI) and handle all patient registration processes within the system. It supports multiple types of visit registrations, including outpatient, inpatient, emergency, and day surgery. In addition, the application allows registration for specific medical services such as operations and physiotherapy. Technologies using in this project are Spring Boot for API, MS SQL database and Flutter for mobile app.

Patient Portal

A secure mobile platform allowing patients to manage their healthcare from their mobile devices. Key features include access to medical records, appointment scheduling and management, prescription refills, secure messaging with providers, and online billing. Technologies using in this project are Spring Boot for API, PostgreSQL database and Flutter for app.

Management Dashboard

A digital tool that provides real-time visual overviews of key business metrics and data. It consolidates information from various sources into a single interface, allowing hospital owners to monitor performance, visualize data with charts and graphs, customize displays for different roles or departments to enhance decision-making and operational efficiency by offering a comprehensive view of organizational performance. Technologies using in this project are Spring Boot for API, PostgreSQL database and Flutter for web app.

Anzer Accounting and ERP

A web-based ERP program which offers small and medium businesses the ability to manage their operations, track invoices and their payments, inventory, and more in an integrated way – from a single application. Technologies using in this project are Perl programming language and PostgreSQL database.

King of Time

A cloud-based attendance management system that performs simple and advanced attendance management using only your PC and the Internet, developed using Spring Boot MVC technology and JavaScript.
